

CUSTOMER ENDORSEMENT

<p>Goran (Sweden) - I can tell you that all my customers are so happy with the GliderGuider! Its a great product and works perfect in the sun!</p>
<p>Joachim (Germany) - Thank for your support and all the effort you committed to help me. I really appreciate this.</p>
<p>Andy (UK) - We are over the moon with our new GliderGuider – thank you! I have been an LK8000 enthusiast since it started; your display does it justice.</p>
<p>Claudia (UK) - I've used GliderGuider in a comp and on a variety of cross-country flights this year. The display is very bright and clear, much better than anything I've used before.</p>
<p>Roger (UK) - I'd just like to say what a fantastic level of service you have provided, right through from initial enquiry to final shipping. Thanks!</p>
<p>Paul (UK) - Well, I finally had the opportunity to do a really good, hands-on test of the GliderGuider this weekend. I used it during a 3 hour cross-country flight and, in a nutshell, it was brilliant! Read more here.</p>
<p>Senne (Netherlands) - Today I received the GliderGuider in a perfect state, for which many thanks. As your service was perfect, I will recommend you to any friends intending to buy a GPS.</p>
<p>Adrian (UK/Australia) – For all of my flights in Australia, totalling about 16 hrs, the GliderGuider worked flawlessly. It was perfectly readable in the bright summer sun. Thanks for a good product and support!</p>
<p>John (Australia) - I have been having a wonderful time using my GliderGuider here in Corowa New South Wales. For the first time I have a GPS that doesn't require half the screen display features to be turned off so it can be read! It's the bee's knees!</p>
<p>Simon (UK) - Thanks again for the fantastic service. I am extremely happy with GliderGuider, and relieved at having an "out of the box" solution. First and foremost I was looking for a reasonably priced sunlight readable PDA that would perform well as a stand alone unit as I fly a number of different machines. The screen is extremely bright, and boasts a good contrast ratio so the display is clear, and absolutely great in direct sunlight (even with dark sunglasses). The GPS engine is fast and responsive, but what has been most impressive is how reliable it has been. It has not dropped signal once, so the GPS optimization you have made puts it head and shoulders above the "consumer grade" solutions I've toyed with. I am also hugely grateful for you making up a charging cable which has allowed me to run off the club glider's battery. I look forward to many more seasons with GG for guidance, and will be coming back when I need to install GG more permanently in my own machine!</p>
<p>Maureen (UK) - The clarity of the screen is spectacular - we really like it.</p>
<p>Andy (UK) – GliderGuider is a fantastic must have for soaring pilots. Coming in at half the cost of competitors, whilst retaining all of the features. The display is extremely bright and genuinely readable in direct sunlight, whilst running Win CE Operating System allowing use of your favourite software. The design is sleek and rugged, with all the required components included in the pack. The Glider Guider team are a pleasure to deal with, going above and beyond to ensure you receive a complete solution. This device has been tweaked since first conception, with inputs from glider pilots, to ensure the very best components are used for the specialist operation demanded by glider pilots. I can't recommend this product enough!</p>
<p>Mike (UK) - I have used my GliderGuider on many occasions since I purchased it a few months ago, with LK-8000 installed. Without question, it has exceeded my expectations in terms of Features, Functionality, ease of operation and the screen visibility in bright sunlight. Much needed and a great benefit to the Gliding community!</p>
<p>Graham (UK) - Just used GliderGuider in South Africa, very readable in all conditions, the LK8000 loaded is surprisingly good software and of course free!</p>

CUSTOMER ENDORSEMENT

Chris (UK) - I am delighted with SkyDemon running on the GliderGuider. The Screen is easily bright enough for the brightest conditions, the GPS engine is very fast and it is an ideal mobile device on which to run SkyDemon. Can I also compliment you on the pre purchase customer service that you provided in promptly answering all the queries that I had and for your patience? You certainly went above and beyond. I cannot recommend your overall customer service and indeed the Glider Guider product highly enough to the GA powered flight community. The glider community certainly has some well kept secrets!

John (Australia) - I purchased a GliderGuider from Allan [www.gliderguider.net] in the UK. I have used it extensively the past few weeks on numerous flights, and I must say it beats everything else I have seen hands down. Even with my dark sun glasses, I can still read the 5" screen with ease. So much better than my HP Ipaq 210, which was my bench-mark until now. I spoke to and e-mailed Allan a number of times prior to purchase, and I must say they really know what they are talking about when it comes to interfacing different gliding systems.

Colin (UK) - I took delivery of my GliderGuider about 3 weeks ago and have since had several flights with it - and also with my old iPAQ operating for back-up while building confidence and to enable side-by-side comparison. I started with the GliderGuider on the suction mount provided and with a connection to an auxiliary battery to allow operation for flights up to 6 hours. More recently I have (with very considerable assistance from Allan [www.gliderguider.net] who I can vouch for as someone willing to go the extra mile to make sure the product gives full Satisfaction) created a permanent mount for the GliderGuider, with permanent connections to the glider battery circuit and to the Flarm. The brightness and clarity of display is vastly superior to the old iPAQ. I hope I sound enthusiastic about the product ... because I am!

Marco (Netherlands) - I already had it side by side outside in the evening sun and the difference is obvious. What really makes the difference is the anti glare coating. No reflection on the GliderGuider.

Robert (UK) - I have just installed and flown with the GliderGuider for the first time. Previously I used an iPAQ which had a lot of shortcomings with reflections even though I had an anti-reflective cover. Probably the biggest problem was flying into a low sun with sun glasses on where I found I could not read anything on the iPAQ screen. The Glider Guider simply solves all of those problems. Yesterday's flight was on a blue day and at all times the screen could be read with ease. I was pleasantly surprised how much better it is with the larger screen as well. It will give space for a few more "Nav Boxes" which up until now I have to limit to a single row in order to keep the map visible.

Steve (UK) - I flew with the GliderGuider yesterday, excellent screen. Thanks!

Jon (UK) - Just got back to the UK and tried the GliderGuider for the first time in anger today. Had an hour in the blue, with full sunshine on the panel and it is perfectly visible.

Gordon (UK) - I found it [the GliderGuider] a great improvement over my old PDA. The best thing is that I don't have to lift my sun glasses and/or shield the display with my map to see the screen. This is a big safety feature as my eyes are only in the cockpit for a fraction of the time compared to the old one. The touch screen is very responsive and I get the navigation information very quickly.

Mark (UK) - Thanks Allan for your excellent service, including exceptionally prompt and well-informed responses to my various questions. At the moment the GliderGuider is the PNA/PDA of choice for glider pilots. The screen is in a different league to the previous generation for sunlight readability. I also welcome the aviation optimised internal GPS which means that when using the internal GPS, thermal, wind and final glide calculations will be far more accurate than with most other phones or PNA's.
